

# ARJUN MENON

AI/ML Engineer | Backend Engineer | Cloud & Distributed Systems

Chennai, India

Email: [arjun.menon@example.com](mailto:arjun.menon@example.com)

GitHub: <https://github.com/arjun-menon>

LinkedIn: <https://www.linkedin.com/in/arjun-menon>

Portfolio: <https://arjunmenon.dev>

---

## PROFESSIONAL SUMMARY

AI/ML and backend engineer with **5+ years of software development experience** building intelligent applications, APIs, and cloud-native systems.

Experienced in Python, machine learning, distributed systems, Docker, Kubernetes, AWS, and LLM-based applications.

Strong interest in building production-grade AI agents with reliable reasoning, tool usage, retrieval, and automated decision-making.

---

## TECHNICAL SKILLS

### Languages:

Python, JavaScript, TypeScript, SQL, Java

### AI / ML:

Machine Learning, Deep Learning, NLP, LLMs, RAG, embeddings, vector databases, prompt engineering, model evaluation

### Backend:

FastAPI, Django, REST APIs, PostgreSQL, Redis, Celery

### Cloud & DevOps:

AWS, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD

### Data:

PostgreSQL, MongoDB, Redis, Elasticsearch

### Tools:

Git, GitHub, Linux, MLflow

---

# PROFESSIONAL EXPERIENCE

## AI Engineer

### Nexora Technologies

June 2023 – Present

- Designed and developed Python-based AI services for document understanding and automated candidate analysis.
- Built an LLM-powered document processing pipeline using retrieval-augmented generation.
- Developed FastAPI services for model inference and application integration.
- Containerized backend services using Docker.
- Deployed several services to AWS infrastructure.
- Worked with Kubernetes for application deployment, scaling, and service management.
- Implemented monitoring and logging for production services.
- Developed automated CI/CD pipelines using GitHub Actions.
- Improved document-processing latency by approximately 35% through asynchronous processing and caching.
- Collaborated with frontend and backend teams to integrate AI services into production applications.

### Selected Project: Intelligent Document Analysis Platform

- Processed thousands of business documents using Python and NLP techniques.
- Used embeddings and vector search to retrieve relevant document context.
- Built an LLM-based question-answering system.
- Added evaluation datasets to measure answer quality.
- Deployed the service using Docker and Kubernetes.

---

## Software Engineer

### DataSphere Labs

July 2021 – May 2023

- Developed REST APIs using Python and FastAPI.
- Built backend services for analytics and data-processing applications.
- Designed PostgreSQL schemas and optimized database queries.

- Developed asynchronous workers using Celery and Redis.
- Created Docker-based development and deployment environments.
- Implemented automated testing and CI pipelines.
- Worked on machine-learning data pipelines and model-serving components.

### **Selected Project: Recommendation Engine**

- Developed a recommendation pipeline using Python and machine-learning algorithms.
  - Processed user interaction data using SQL and Python.
  - Built APIs for serving recommendations.
  - Added caching to reduce repeated database queries.
- 

## **EARLY EXPERIENCE**

### **Software Engineering Intern**

#### **CodeNova Systems**

**January 2021 – June 2021**

- Developed Python utilities for internal engineering teams.
  - Created REST API prototypes.
  - Worked with Git and Linux development environments.
  - Assisted with automated testing.
- 

## **PROJECTS**

### **Autonomous Research Agent**

**Python | LLM | RAG | FastAPI | Vector Database**

- Built an AI agent capable of breaking research tasks into multiple steps.
- Added document retrieval and source-based reasoning.
- Implemented tool calling for web and document search.
- Added confidence indicators to generated answers.
- Designed the system to avoid unsupported conclusions.

GitHub: <https://github.com/arjun-menon/autonomous-research-agent>

---

## Kubernetes-Based ML Platform

Python | Kubernetes | Docker | AWS | MLflow

- Built a containerized machine-learning inference service.
- Created Kubernetes deployment configurations.
- Implemented horizontal scaling for inference workloads.
- Used MLflow for experiment tracking.
- Deployed the system on AWS.

GitHub: <https://github.com/arjun-menon/ml-kubernetes-platform>

---

## NLP Classification System

Python | NLP | Transformers

- Built a text-classification pipeline.
  - Compared traditional machine-learning models with transformer-based approaches.
  - Created preprocessing and evaluation pipelines.
  - Achieved 91% validation accuracy on the project dataset.
- 

## CERTIFICATIONS

**AWS Certified Cloud Practitioner**

2024

**Machine Learning Specialization**

2023

---

## EDUCATION

**B.Tech in Computer Science and Engineering**

Anna Institute of Technology

## ADDITIONAL INFORMATION

- Open-source contributor to Python and AI-related projects.
  - Regularly participate in competitive programming and technical challenges.
  - Comfortable working across AI, backend, cloud, and DevOps technologies.
  - Interested in autonomous AI agents and reliable AI systems.
-
